DA Assignment – 1

Supermarket Sales Analysis using Tableau

Name : Palakolanu Satya Priya

Roll No : 22BFA04312

Branch : Electronics and Communication Engineering

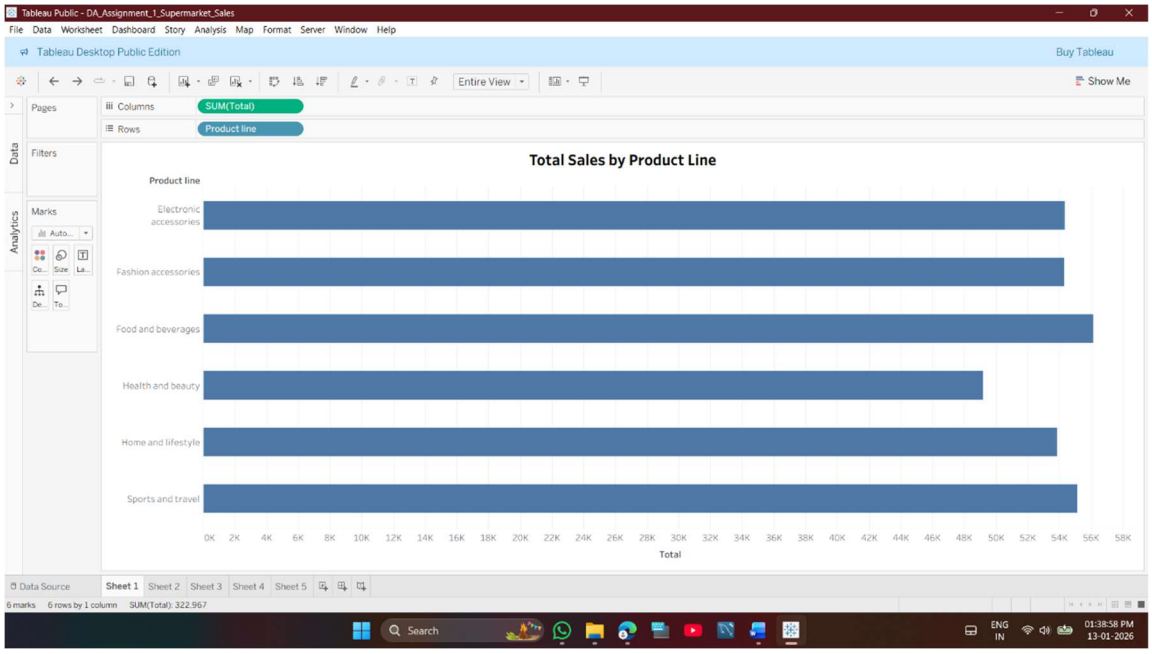
College : Sri Venkateswara College of Engineering (SVCE), Tirupati.

Email : palakolanusatyapriya@gmail.com

Introduction:

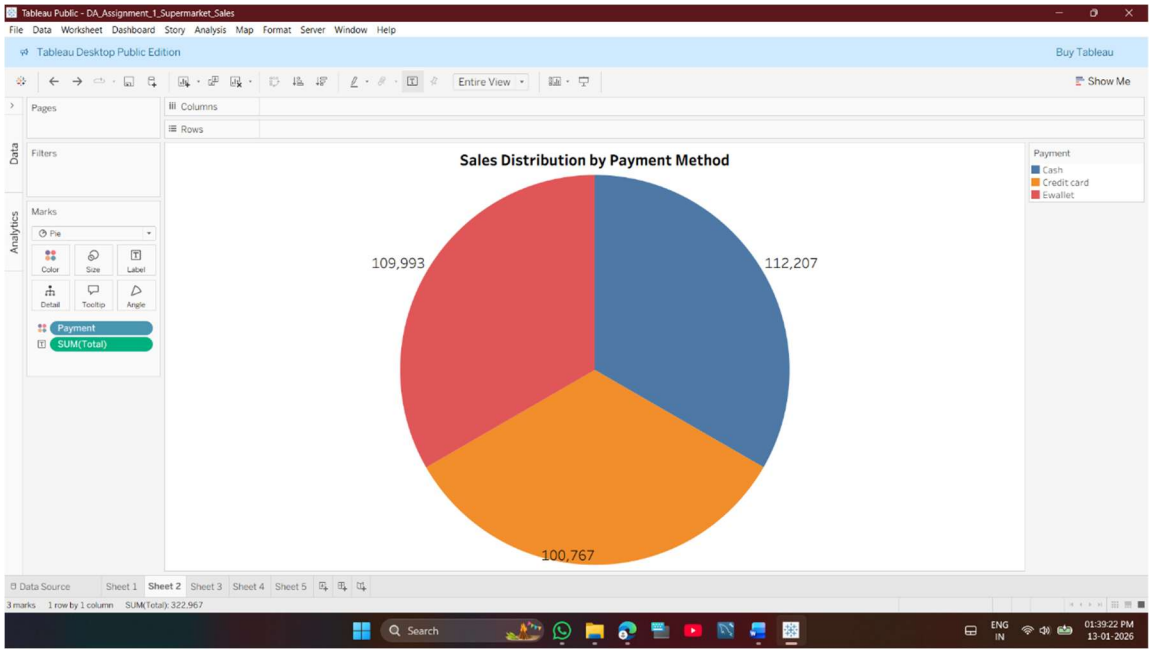
The objective of this assignment is to explore supermarket sales data using Tableau for visualization and analysis. The dataset includes branch-wise sales information categorized by product lines, payment types, and monthly records. Visual dashboards are developed to examine revenue distribution and customer purchasing trends.

1. Bar Chart – Total Sales by Product Line



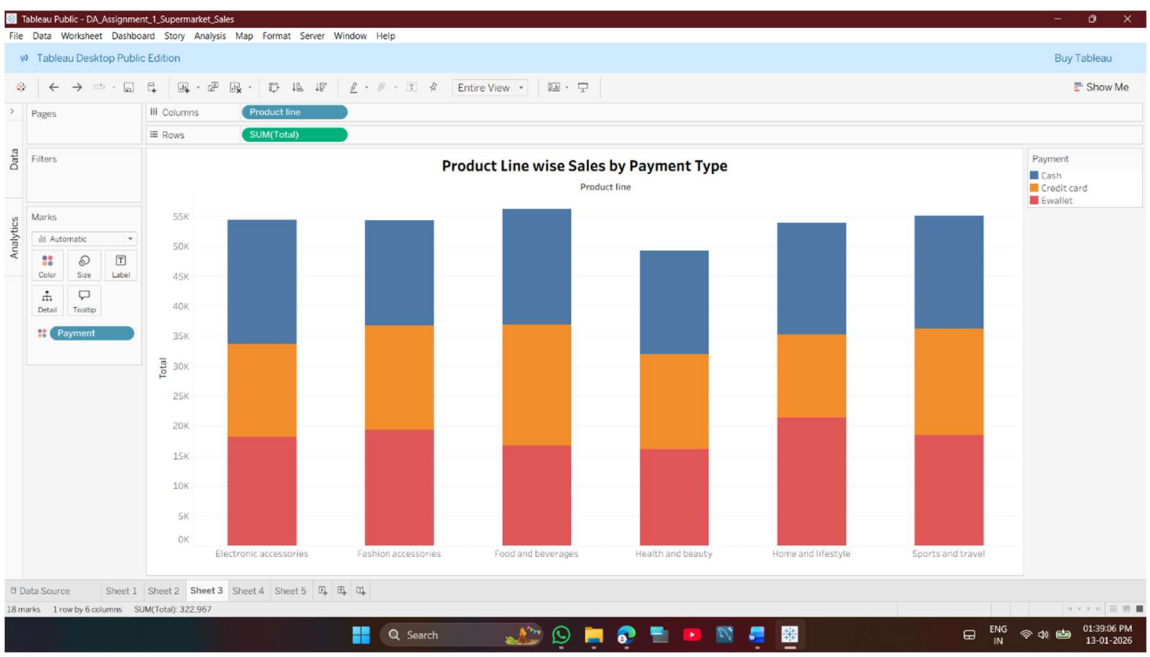
This visualization presents a comparison of total sales across all product categories. It helps determine which segment generates the highest income.

2. Pie Chart – Sales Distribution by Payment Method



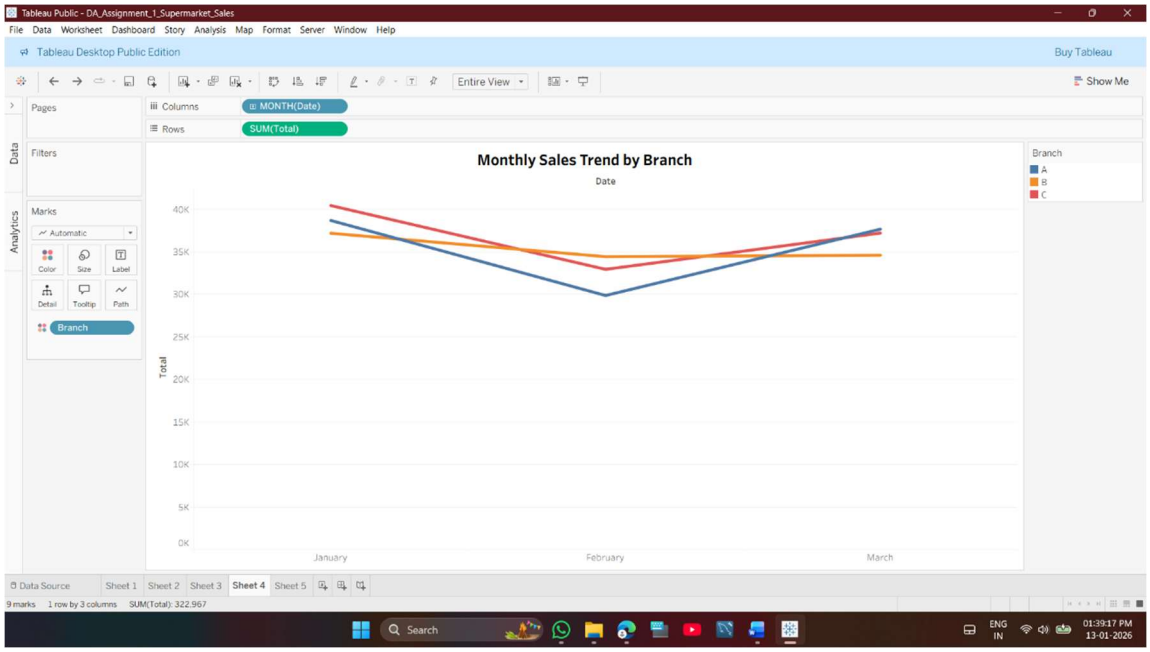
The pie chart shows how total revenue is divided among different payment modes. It reflects customer transaction preferences.

3. Stacked Bar Chart – Product Line vs Payment Method



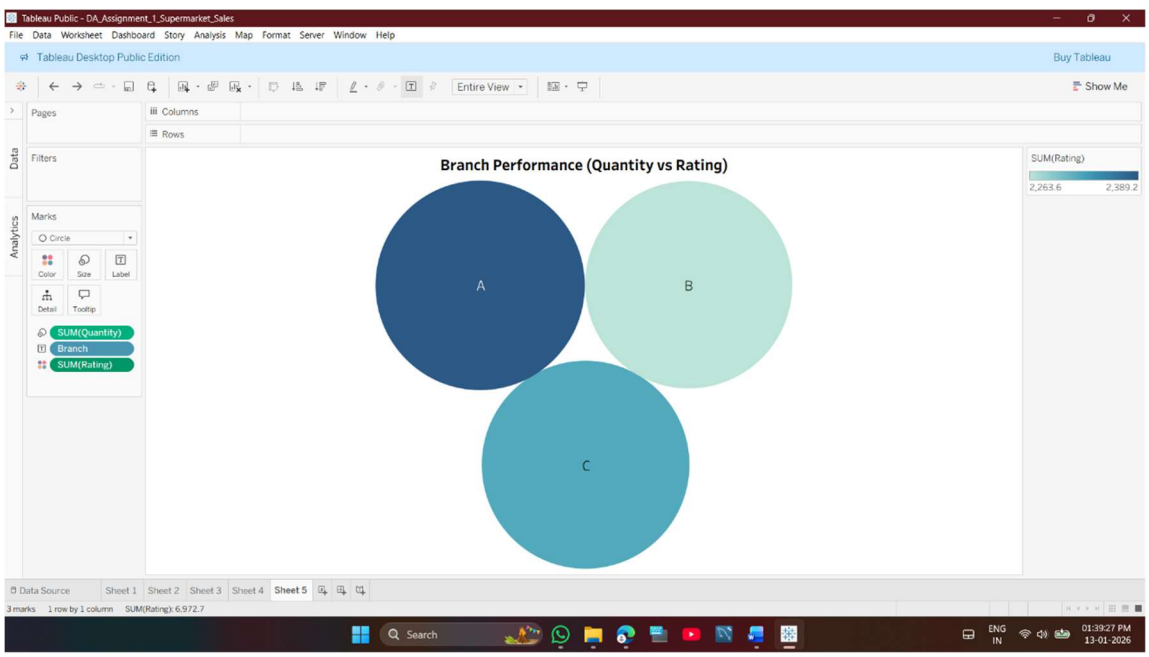
This stacked bar chart illustrates the relationship between product categories and payment types. It helps in understanding how customers pay for each product line.

4. Line Chart – Monthly Sales Trend by Branch



The line graph tracks monthly sales performance of each branch. It reveals trends and fluctuations over the observed period.

5. Bubble Chart – Branch Performance (Quantity vs Rating)



This chart evaluates branch efficiency by comparing quantity sold with customer ratings. It provides insight into service and sales performance.
