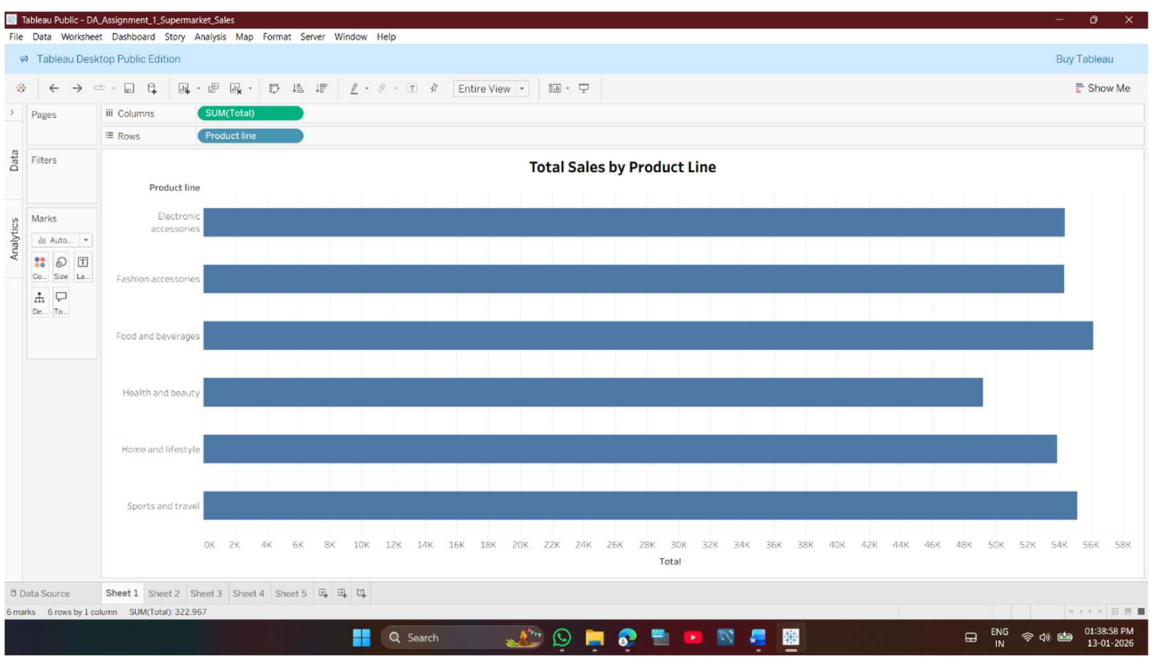
Introduction:

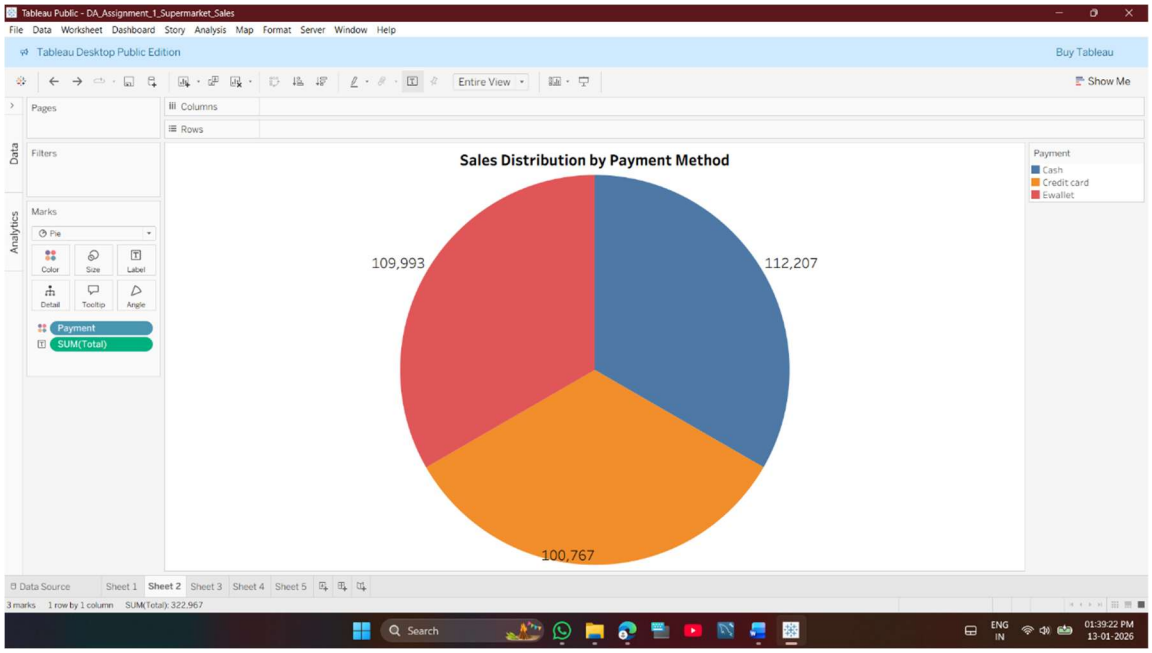
In this assignment, supermarket sales data is analyzed using Tableau to generate meaningful visual insights. The dataset includes sales information from multiple branches categorized by product type, payment mode, and month. The visual representations help understand overall sales performance and customer trends.

1. Bar Chart – Total Sales by Product Line



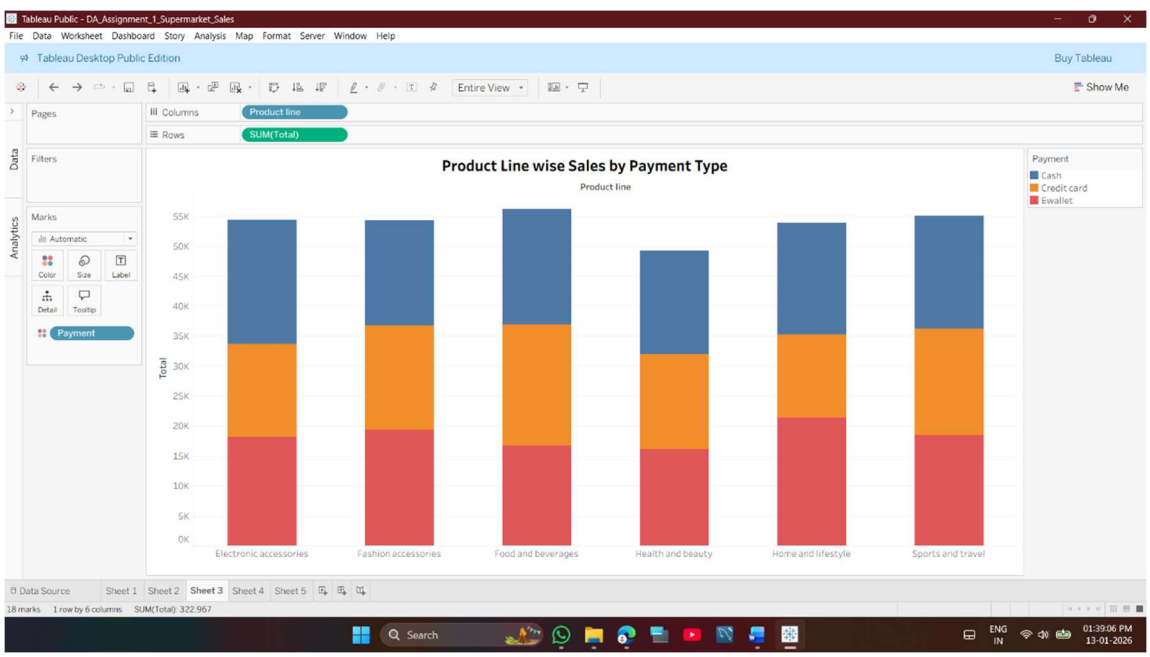
This chart compares revenue generated by each product category and highlights the leading sales segment.

2. Pie Chart – Sales Distribution by Payment Method



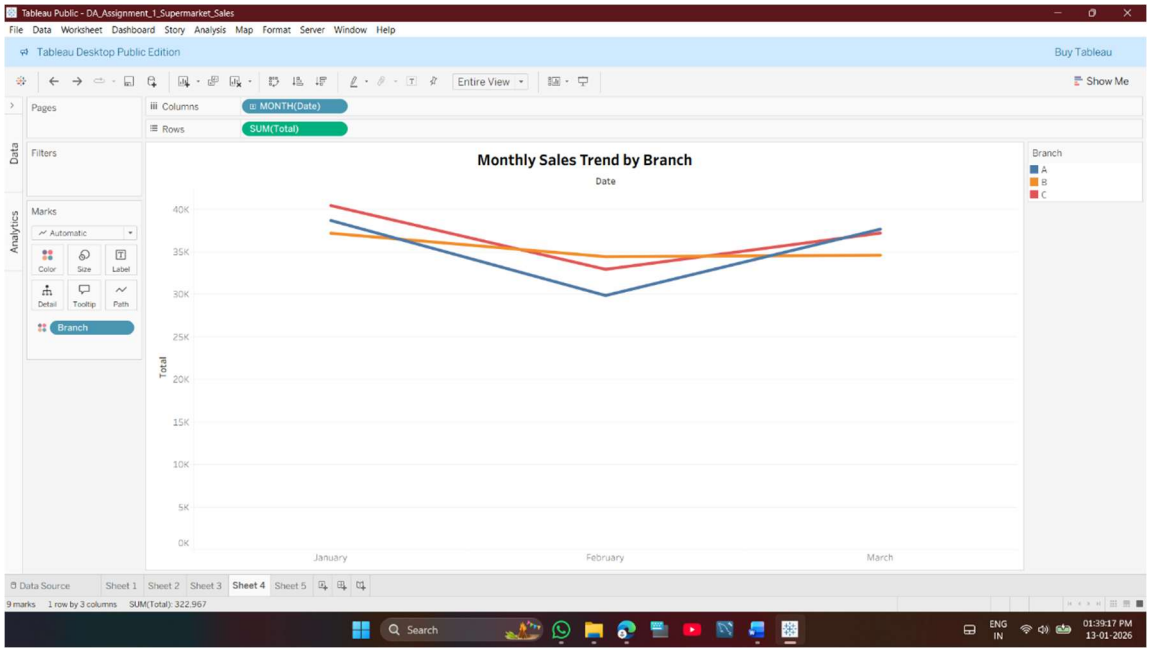
The pie chart demonstrates how revenue is shared across various payment options used by customers.

3. Stacked Bar Chart – Product Line vs Payment Method



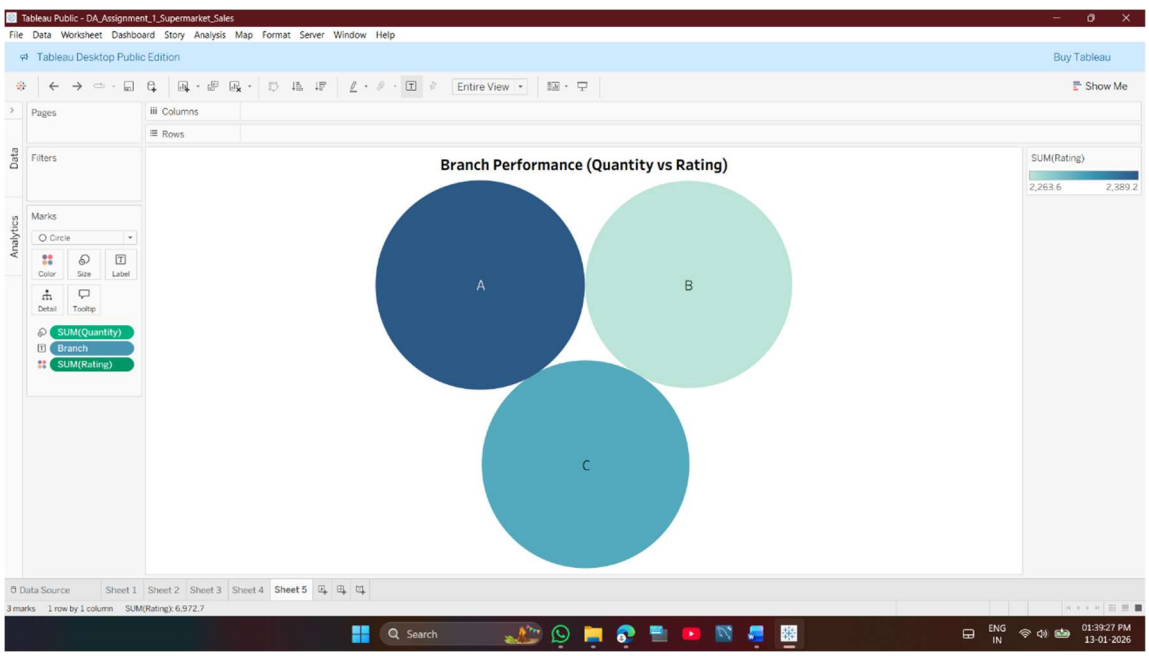
This visualization presents payment-wise contribution within each product category, offering deeper sales insights.

4. Line Chart – Monthly Sales Trend by Branch



The line chart illustrates sales movement across different branches over time.

5. Bubble Chart – Branch Performance (Quantity vs Rating)



This chart visualizes branch comparison based on quantity sold and rating performance metrics.
