DA Assignment – 1

Supermarket Sales Analysis using Tableau

Name : Modugula Gangothri

Roll No : 22BFA04281

Branch : Electronics and Communication Engineering

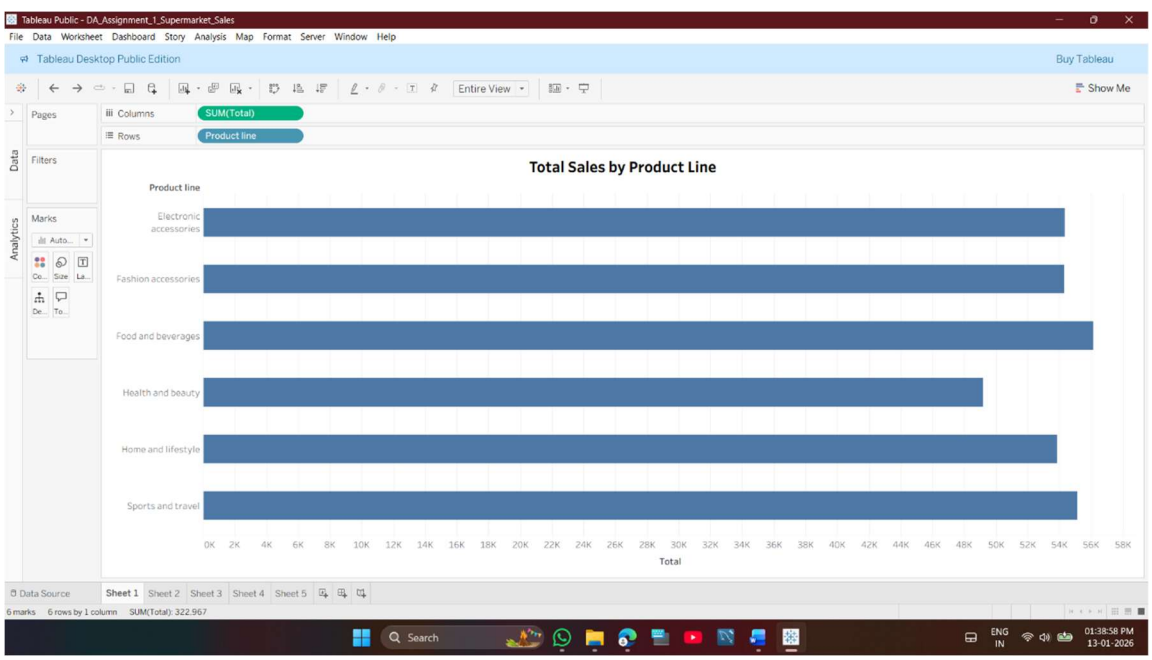
College : Sri Venkateswara College of Engineering (SVCE), Tirupati.

Email : gangothrimodugula@gmail.com

Introduction:

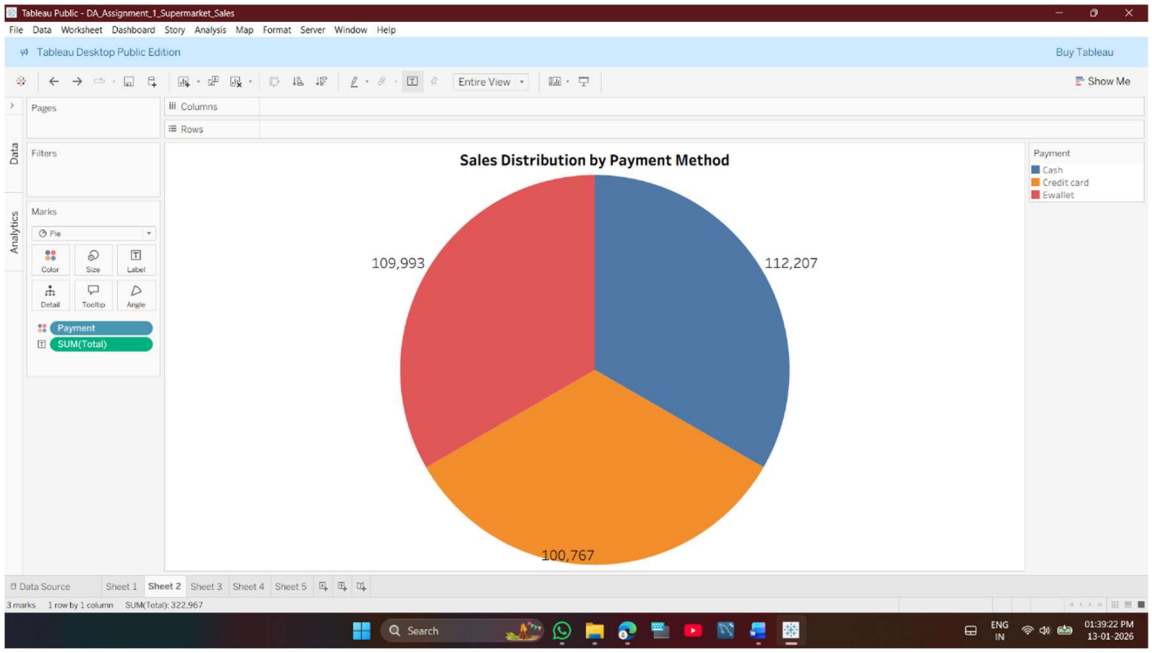
This assignment involves performing data analysis on supermarket sales data using Tableau. The dataset consists of historical records from three branches covering product lines, payment methods, and time periods. The visualizations aim to identify sales trends and business insights.

1. Bar Chart – Total Sales by Product Line



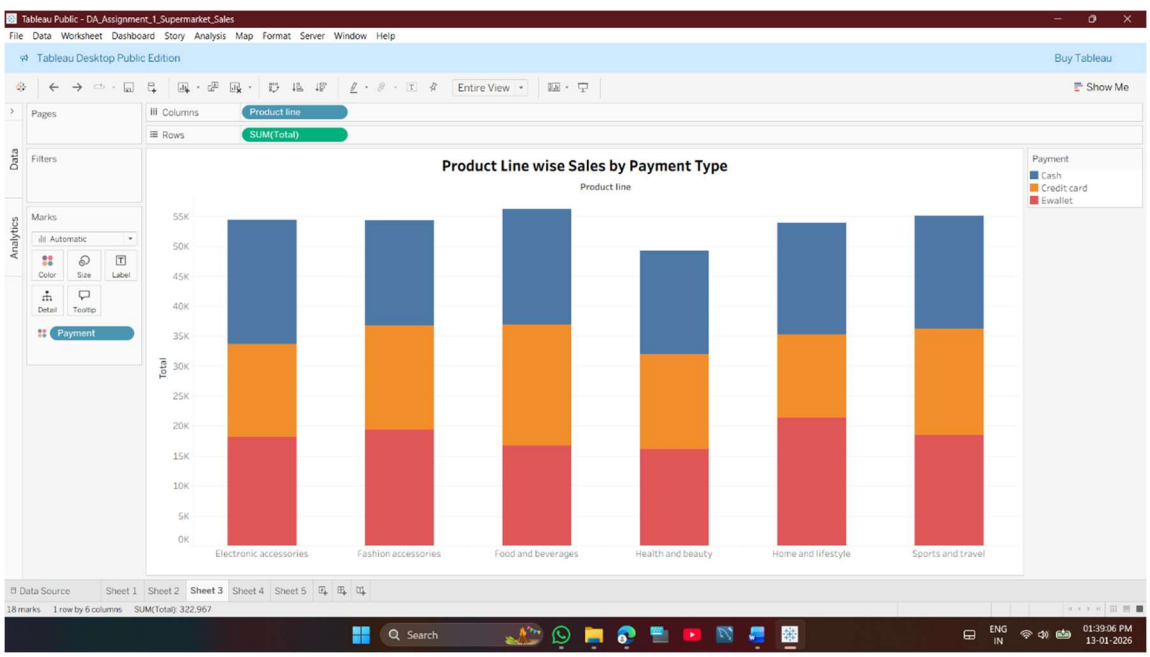
The bar chart highlights variation in sales among different product lines. It assists in identifying high-performing categories.

2. Pie Chart – Sales Distribution by Payment Method



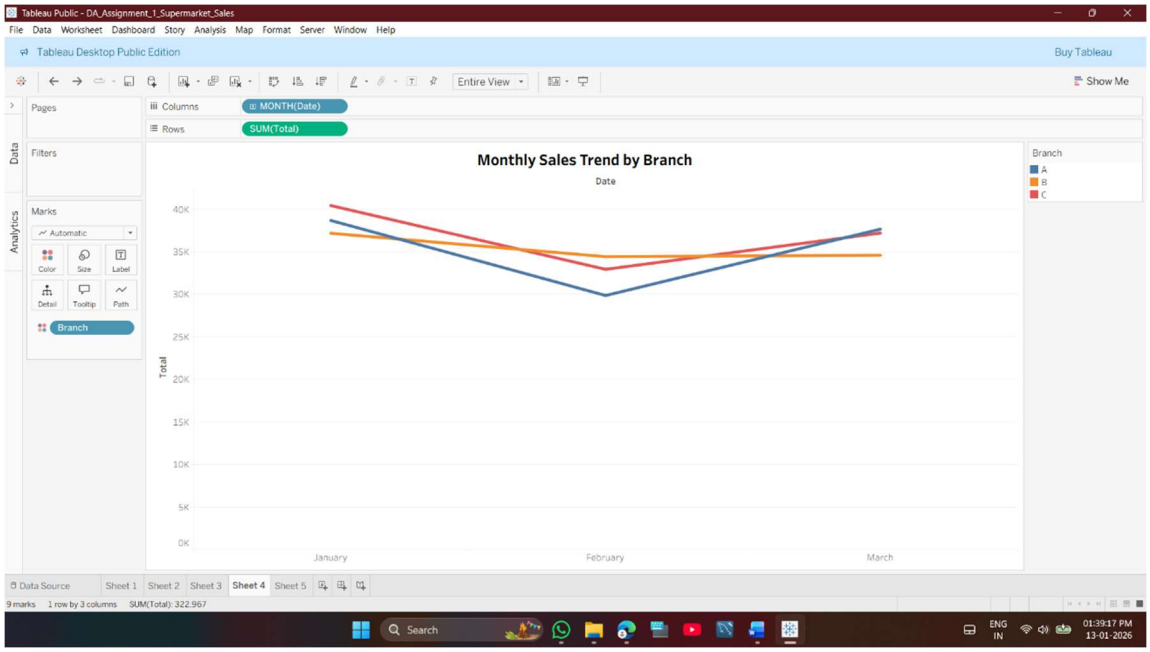
This chart represents the proportion of total sales contributed by each payment method. It helps analyze customer payment behaviour.

3. Stacked Bar Chart – Product Line vs Payment Method



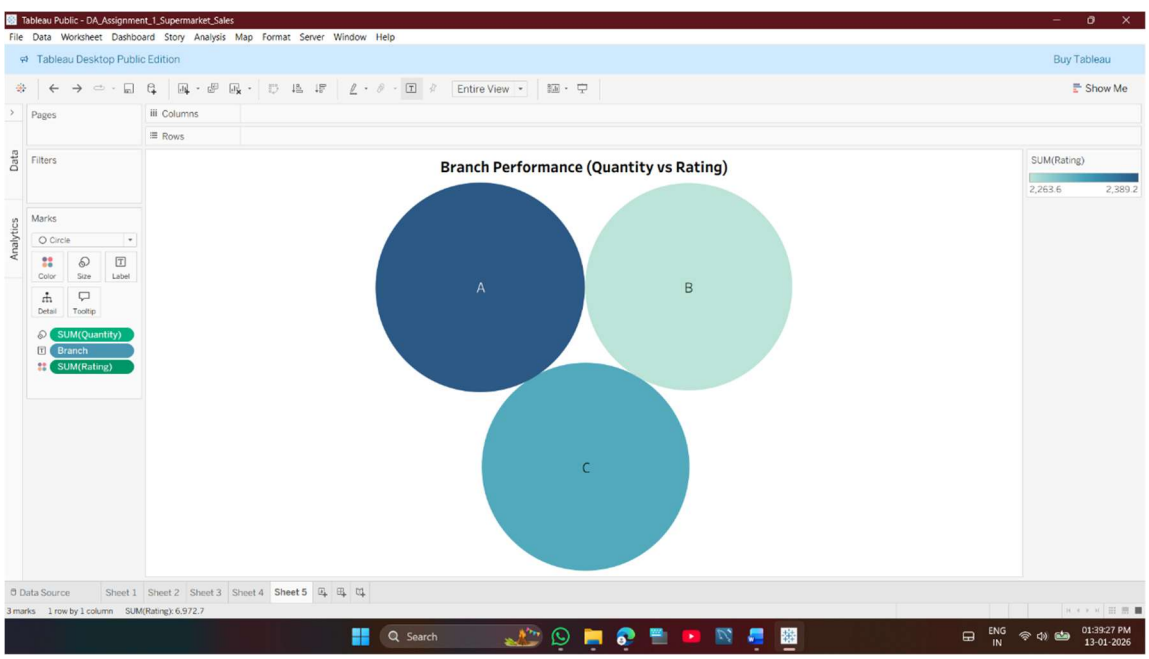
The stacked bar chart combines product and payment data to show their collective impact on overall sales.

4. Line Chart – Monthly Sales Trend by Branch



This visualization displays month-wise sales comparison among branches. It indicates performance consistency over time.

5. Bubble Chart – Branch Performance (Quantity vs Rating)



The bubble chart compares branches based on sales volume and customer satisfaction ratings.
