DA Assignment – 1

Supermarket Sales Analysis using Tableau

Name : Matla Yogeshwar

Roll No : 22BFA04280

Branch : Electronics and Communication Engineering

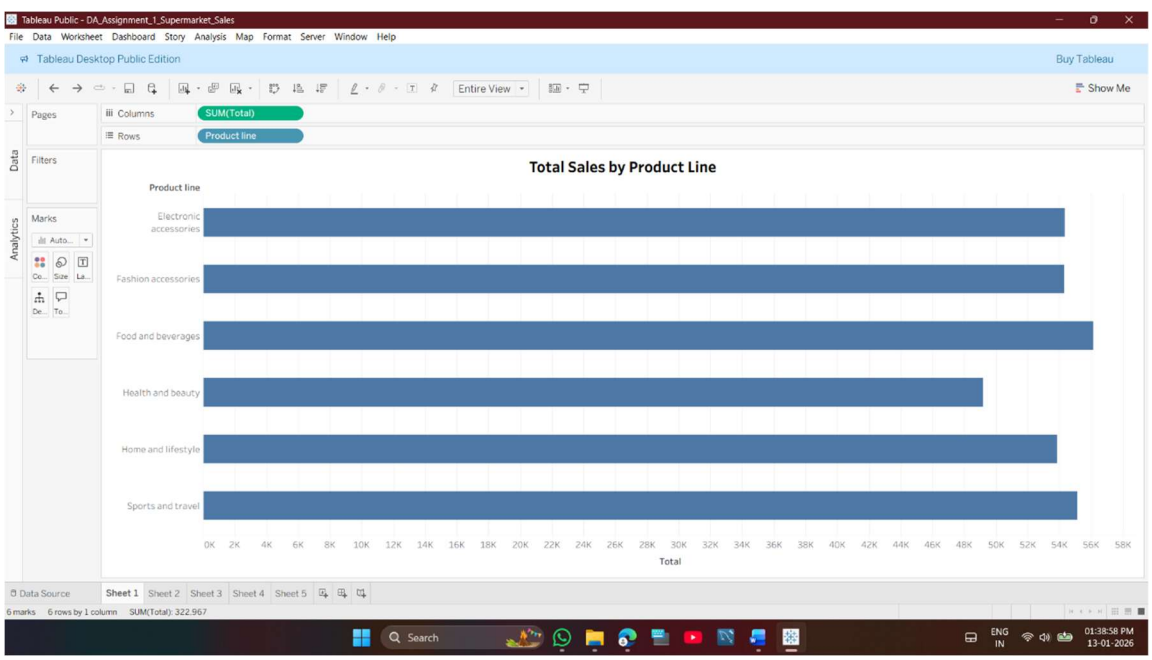
College : Sri Venkateswara College of Engineering (SVCE), Tirupati.

Email : matlayogeshwar@gmail.com

Introduction:

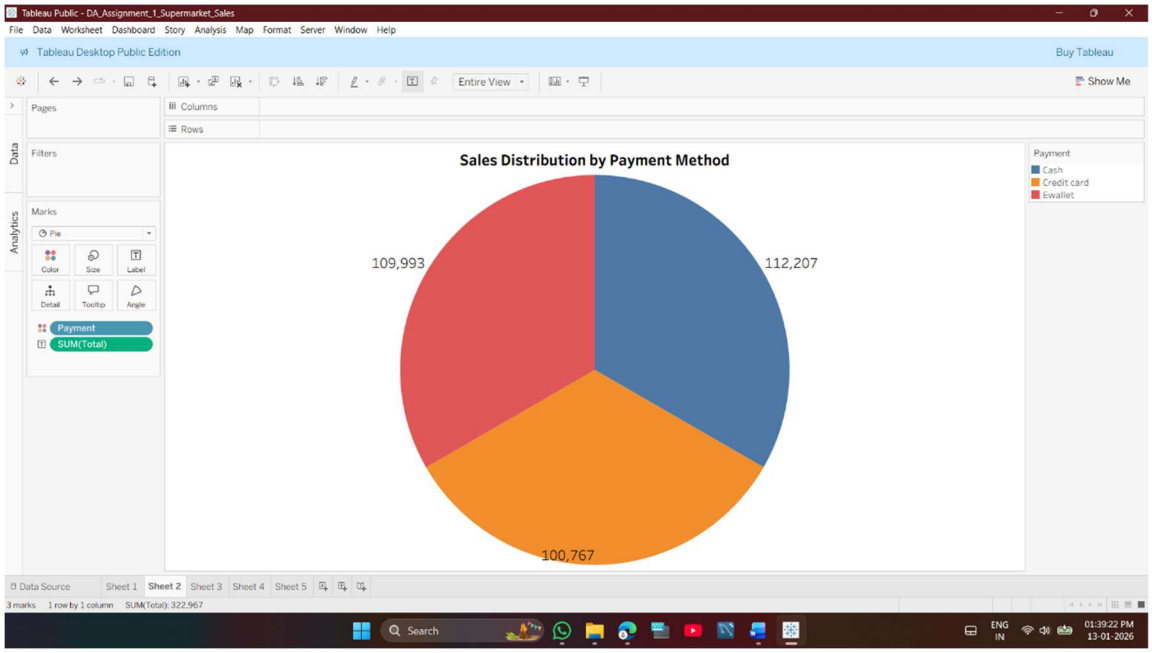
This assignment focuses on analyzing supermarket sales data using Tableau. The dataset contains historical sales records from three branches across different product lines, payment methods, and time periods. Various visualizations are created to understand sales patterns and customer behaviour.

1. Bar Chart – Total Sales by Product Line



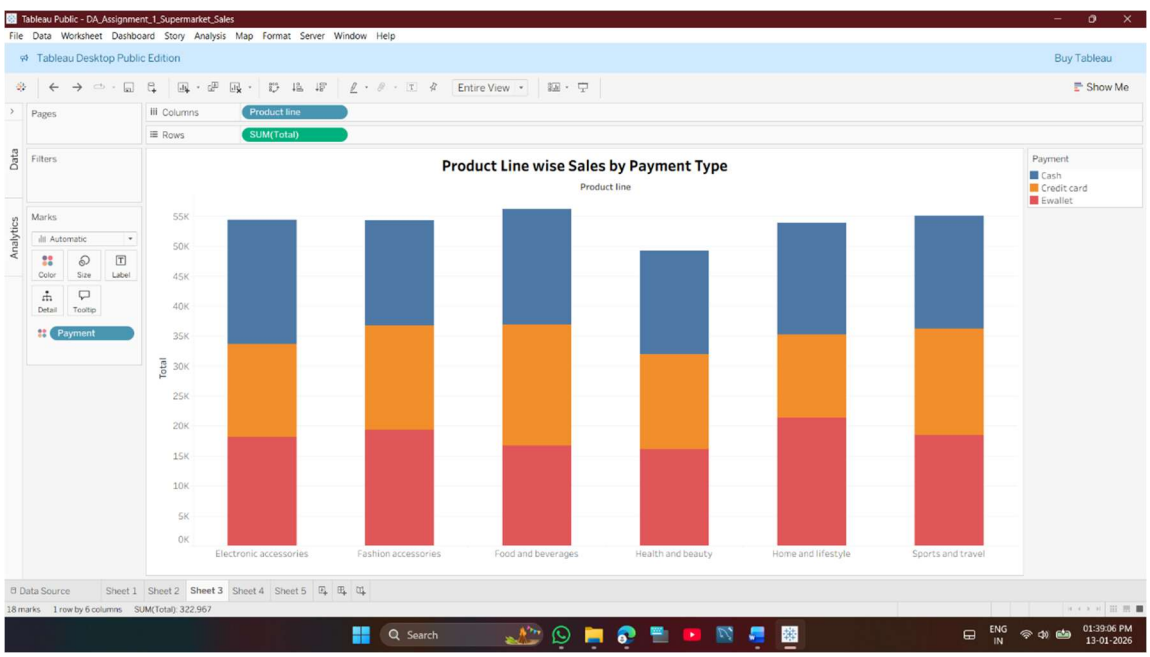
This bar chart compares total revenue generated by each product line. It clearly shows which category contributes the highest sales among all segments.

2. Pie Chart – Sales Distribution by Payment Method



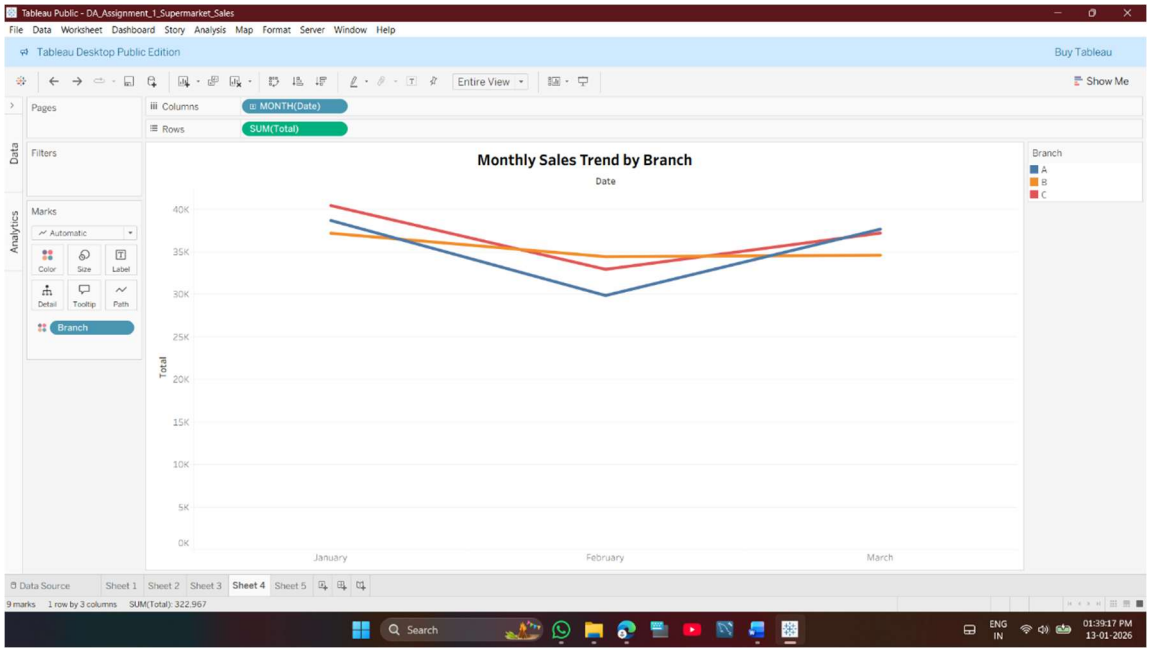
The pie chart illustrates the percentage distribution of total sales across different payment methods. It helps identify the most preferred payment option among customers.

3. Stacked Bar Chart – Product Line vs Payment Method



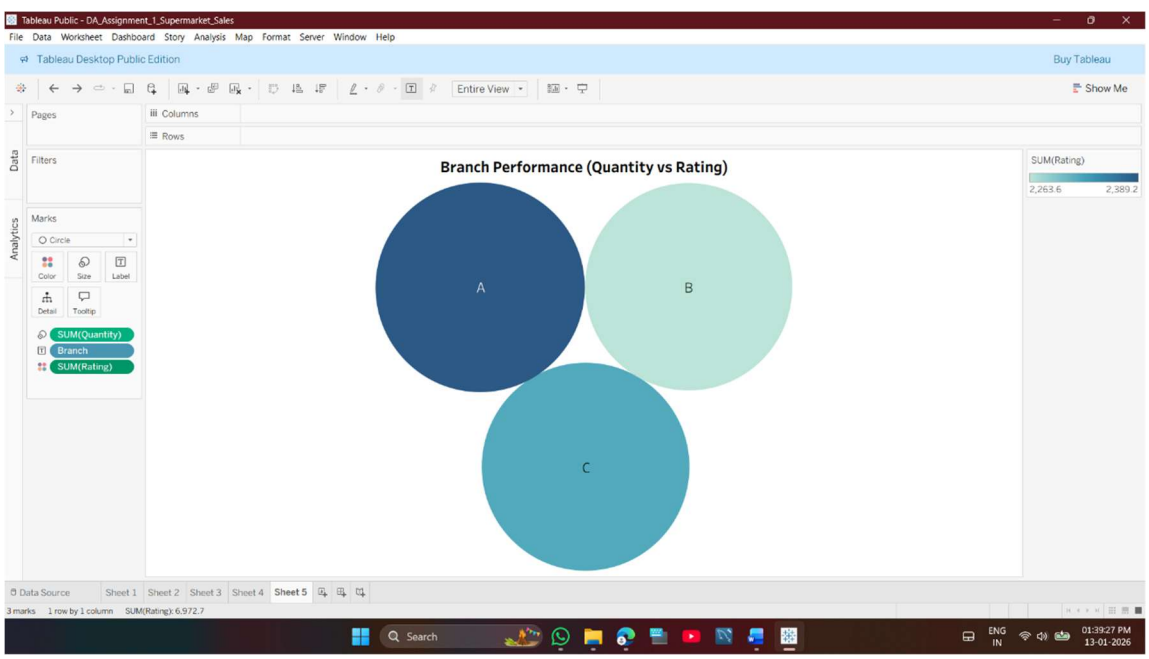
This chart displays payment-wise contribution to sales for each product line. It provides a combined view of product performance and payment patterns.

4. Line Chart – Monthly Sales Trend by Branch



The line chart represents monthly sales trends for branches A, B, and C. It highlights variations and growth patterns over time.

5. Bubble Chart – Branch Performance (Quantity vs Rating)



This bubble chart compares branch performance based on quantity sold and customer ratings. Larger bubbles indicate stronger performance.
